- 14 Reactor port
- 15 Low pressure protection switch port

48/60K Outdoor Main Control Board

No. Function description

- 1 Communication port to main board
- 2 Port for program update
- 3 Port for EEPROM update
- 4 Dip Switch SW1
- 5 24V communication port
- 6 Dip Switch SW2
- 7 Dip Switch SW3
- 8 Port for wired controller
- 9 RS-485 communication port
- 10 LED dispaly

K1~K4 Button for checking or setting

Display Board (Communication board)

Definition and uses of the button

K1: Press "K1" once to enter the outdoor unit parameter inspection.

K2: Press "K2" to view the parameters in sequence.

K3: Press "K3" to view the parameters in reverse order.

K4: "SET" button used to enter forced cooling mode to recover the refrigerant.

Definition of SW1~SW3

		Outdoor Display Board SW1 DIP switch selection		Outdoor Display Board SW2 DIP switch selection				loor Dis DIP swit			
0)4/4/4	OFF	24V Control(Default)	0)4/0.4	OFF	Auto Defrosting(Default)	0)40.4	OFF	Normal energy efficiency			
SW1.1	ON	RS485 Comm. Mode	SW2.1	ON	Periodically Defrosting	SW3.1	ON	High energy efficiency (SE18)			E18)
SW1.2	OFF	°F for Fahrenheit(Default)	CIADO	OFF	Defrost interval 60 minutes(Default)	SW3 2 OF	OFF	SW3.3	OFF	Model	24K
5001.2	ON	°C for Celsius	SW2.2	ON	Defrost interval 30 minutes		OFF		ON		36K
SW1.3	OFF	Heating and cooling	SW2.3	OFF	Normal Defrosting(Default)		ON		OFF		48K
5001.3	ON	Single-cooled	3002.3	ON	Accelerate Defrosting		ON		ON		60K

SVV1.4	ON	Accelerate Cooling	SVV2.4	ON	O/B Thermostat	SW3.4	ON	Accelerate Heating			

3 Low voltage wiring diagram

The following wiring diagram are suitable for the Indoor Unit and Outdoor Unit with 24V thermostat.

Wiring for 1H and 1C thermostat (no heat pump system model)

Note:Because Y1 and Y2 are jumped, the indoor fan will only run in high stage.

Note: Any time the electric heat elements are active, the indoor fan will run in high stage.

Wiring for 1H and 1C thermostat (no heat pump system model)

Note:Because Y1 and Y2 are jumped, the indoor fan will only run in high stage.

Wiring for 2H and 1C thermostat (no heat pump system model)

Note:Because Y1 and Y2 are jumped, the indoor fan will only run in high stage.

Note: Any time the electric heat elements are active, the indoor fan will run in high stage.

Wiring for 2H and 2C thermostat (no heat pump system model)

Wiring for 3H and 1C thermostat (no heat pump system model)

Wiring for 3H and 2C thermostat (no heat pump system model)

Wiring for 4H and 2C thermostat (no heat pump system model)

Note:Y1 and Y2 here represents 2 stages of fan cooling only, the compressor modulates separately from the fan.

Note: Any time the electric heat elements are active, the indoor fan will run in high stage.

Control Logic:

Indoor unit connector

Connector	Purpose			
R	24V Power Connection			
С	Common			
G	Fan Control			
Y1	Low Cooling			
Y2	High Cooling			
В	Heating Reversing Valve			
W1	Stage 1 Electric Heating			
W2	Stage 2 Electric Heating			
DH	Dehumidification			

Outdoor unit connector

Connector	Purpose
С	Common
Υ	Cooling
В	Heating Reversing Valve
W	Defrost control

Note:

- 1) DH wiring is optional and requires a thermostat with a humidistat. DH functions as Passive Dehumidification and will downstage the indoor fan to first stage. System will operate according to normal sequence of operations if DH wiring is absent.
- 2) Dashed lines in the above thermostat wiring diagrams refer to optional wiring (wiring for Passive Dehumidification Function and/OR Electric Heat). For thermostat wiring please refer to the Owner's Manual of the thermostat.
- 3) B wire must be used with heat pump system only, the reversing valve energizes in heating.

Part 4

1 Error code table

Error code	Error definition
FA	EEPROM fault (on main PCB)
FB	EEPROM fault (on inverter module)
H1	P5 protection appears 3 times in 180 minutes can't be recovered until re-power on
H2	FF protection appears 3 times in 150 minutes can't be recovered until re-power on
Н3	PD protection appears 3 times in 180 minutes can't be recovered until re-power on(not applicable for cooling only unit)
Н4	P8 protection appears 3 times in 120 minutes can't be recovered until re-power on
Н5	P2 protection appears 3 times in 240 minutes can't be recovered until re-power on
H6	P4 protection appears 3 times in 100 minutes can't be recovered until re-power on
H7	PC protection appears 3 times in 200 minutes can't be recovered until re-power on
H8	FE protection appears 3 times in 120 minutes can't be recovered until re-power on
НС	F7 protection appears 3 times in 180 minutes can't be recovered until re-power on(not applicable for cooling only unit)
HE	F8 protection appears 3 times in 60 minutes can't be recovered until re-power on (not applicable for cooling only unit)
НО	Inverter module and main PCB communication error
LO	DC bus low voltage protection
L1	DC bus high voltage protection
FF	High pressure switch fault for 20 minutes
P1	High pressure switch fault for 4 seconds
P2	Low pressure protection in cooling mode
P3	Over current protection
P4	Discharge temperature protection
P5	T3 high temperature protection in cooling mode
P6	Compressor inverter module protection
P7	Indoor unit anti-freezing protection(Applicable only when communication is established between the ComfortStar outdoor unit and the ComfortStar indoor unit via RS485)
P8	IPM high temperature protection

Р9	Fan motor inverter module protection
PC	Overwet operation protection(Applicable only when communication is established between the
-	ComfortStar outdoor unit and the ComfortStar indoor unit via RS485)
PD	High pressure protection in heating mode(not applicable for cooling only unit)
FO	Outdoor unit and indoor unit communication error(From Outdoor unit)
F4	T4 - Ambient temperature sensor fault
F5	TP - Discharge temperature sensor fault
F6	T3 - Coil temperature sensor fault
F7	T7 temperature sensor fault (not applicable for cooling only unit)
F8	Condensation of the refrigerant pipe protection (not applicable for cooling only unit)
F9	AC voltage is too high or too low protection
FC	IPM temperature sensor fault
FD	Pressure sensor fault
FE	T3/TP temperature sensor loose protection
E1	Outdoor unit and indoor unit communication error (Applicable only when communication is
	established between the ComfortStar outdoor unit and the ComfortStar indoor unit via RS485)
E2	Indoor unit T1 temperature sensor fault (Applicable only when communication is established
	between the ComfortStar outdoor unit and the ComfortStar indoor unit via RS485)
E3	Indoor unit T2 temperature sensor fault (Applicable only when communication is established between the ComfortStar outdoor unit and the ComfortStar indoor unit via RS485)
E4	Refrigerant concentration sensor fault (Applicable only when communication is established
E 4	between the ComfortStar outdoor unit and the ComfortStar indoor unit via RS485)
FC	Refrigerant leakage protection (Applicable only when communication is established between the
E6	ComfortStar outdoor unit and the ComfortStar indoor unit via RS485)
E8	Indoor fan motor current fault (Applicable only when communication is established between the
EÓ	ComfortStar outdoor unit and the ComfortStar indoor unit via RS485)
E9	Wired controller communication fault (Applicable only when communication is established
EÐ	between the ComfortStar outdoor unit and the ComfortStar indoor unit via RS485)
ATL	Ambient temperature out of bounds protection
<u>-</u>	, p

2 Troubleshooting

2.1 Safety Precautions

The following precautions here are quite important, so be sure to follow them carefully. Read these instructions carefully before installation. Keep this manual in a handy for future preference.

Failure to adhere to all precautionary measures listed in this section may result in personal injury, damage to the unit or to property, or in extreme cases, death.

WARNING

■ Indicates a potentially hazardous situation which if not avoided, could result in death or serious injury.

CAUTION

- Indicates a potentially hazardous situation which if not avoided, may result in minor or moderate injury.
- It is also used to alert against unsafe practices.

2.1.1 In case of Accidents or Emergency

WARNING

- If a gas leak is suspected, immediately turn off the gas and ventilate the area if a gas leak is suspected before turning the unit on.
- If strange sounds or smoke is detected from the unit, turn the breaker off and disconnect the power supply cable.
- If the unit comes into contact with liquid, contact an authorized service center.
- If liquid from the batteries makes contact with skin or clothing, immediately rinse or wash the area well with clean water.
- Do not insert hands or other objects into the air inlet or outlet while the unit is plugged in.
- Do not operate the unit with wet hands.

CAUTION

- Clean and ventilate the unit at regular intervals when operating it near a stove or near similar devices.
- Do not use the unit during severe weather conditions. If possible, remove the product from the window before such occurrences.

2.1.2 Information servicing(For flammable materials)

WARNING

- Use this unit only on a dedicated circuit.
- Damage to the installation area could cause the unit
- to fall, potentially resulting in personal injury, property damage, or product failure.
- Only qualified personnel should disassemble, install, remove, or repair the unit.
- Only a qualified electrician should perform electrical work. For more information, contact your dealer, seller, or an authorized service center.

CAUTION

■ While unpacking be careful of sharp edges around the unit as well as the edges of the fins on the condenser and evaporator.

2.1.3 Operation and Maintenance

WARNING

- Do not use defective or under-rated circuit breakers.
- Ensure the unit is properly grounded and that a dedicated circuit and breaker are installed.
- Do not modify or extend the power cable. Ensure the power cable is secure and not damaged during operation.
- Do not unplug the power supply plug during operation.
- Do not store or use flammable materials near the unit.
- Do not open the inlet grill of the unit during operation.
- Do not touch the electrostatic filter if the unit is equipped with one.
- Do not block the inlet or outlet of air flow to the unit.
- Do not use harsh detergents, solvents, or similar items to clean the unit. Use a soft cloth for cleaning.
- Do not touch the metal parts of the unit when removing the air filter as they are very sharp.
- Do not step on or place anything on the unit or outdoor units.
- Do not drink water drained from the unit.
- Avoid direct skin contact with water drained from the unit.

■ Use a firm stool or step ladder according to manufacturer procedures when cleaning or maintaining the unit.

CAUTION

- Do not install or operate the unit for an extended period of time in areas of high humidity or in an environment directly exposing it to sea wind or salt spray.
- Do not install the unit on a defective or damaged installation stand, or in an unsecured location.
- Ensure the unit is installed at a level position
- Do not install the unit where noise or air discharge
- Created by the outdoor unit will negatively impact the environment or nearby residences.
- Do not expose skin directly to the air discharged by the unit for prolonged periods of time.
- Ensure the unit operates in areas waterOr other liquids.
- Ensure the drain hose is installed correctly to ensure proper water drainage.
- When lifting or transporting the unit, it is recommended that two or more people are used for this task.
- When the unit is not to be used for an extended time, disconnect the power supply or turn off the breaker.

2.2 ATL Troubleshooting

- ATL indicates ambient temperature out of bounds protection.
- The unit stops running and will not start operating until the ambient temperature returns to the allowable temperature range, error code is displayed on the communication board.
- The allowable ambient temperature range is 5^{125} (-15 52 C).

2.3 E1/F0 Troubleshooting

- E1 indicates RS485 communication fault between outdoor unit and indoor unit(from indoor side).
- F0 indicates RS485 communication fault between outdoor unit and indoor unit(from outdoor side).
- The unit stops running and error code is displayed on the communication board

2.4 F4/F5/F6/FC/FE/E2/E3/H8 Troubleshooting

- E2 indicates indoor unit T1 temperature sensor fault
- E3 indicates indoor unit T2 temperature sensor fault
- F4 indicates ambient temperature sensor fault
- F5 indicates discharge temperature sensor fault
- F6 indicates coil temperature sensor fault
- FC indicates IPM temperature sensor fault
- FE indicates T3/TP temperature sensor loose protection
- H8 indicates FE protection appears 3 times in 120 minutes can't be recovered until re-power on.
- The unit stops running and error code is displayed on the communication board

Note:

- 1) Measure sensor resistance. If the resistance is too low, the sensor has short-circuited. If the resistance is not consistent with the sensor's resistance characteristics table, the sensor has failed.
- 2) E2/E3 is applicable only when communication is established between the ComfortStar outdoor unit and the ComfortStar indoor unit via RS-485.

2.5 E8 Troubleshooting

- E8 indicates indoor fan motor current fault, E8 is applicable only when communication is established between the ComfortStar outdoor unit and the ComfortStar indoor unit via RS-485.
- The unit stops running and error code is displayed on the communication board

2.6 E9 Troubleshooting

- E9 indicates wired controller communication fault, E9 is applicable only when communication is established between the ComfortStar outdoor unit and the ComfortStar indoor unit via RS485.
- The unit stops running and error code is displayed on the communication board

2.7 FA/FB Troubleshooting

- FA indicates EEPROM fault on the main PCB
- FB indicates EEPROM fault on the inverter module
- The unit stops running and error code is displayed on the communication board

2.8 FD Troubleshooting

- FD indicates pressure sensor fault
- The unit stops running and error code is displayed on the communication board

2.9 FF/P1/H2 Troubleshooting

- FF indicates high pressure switch fault for 20 minutes.
- P1 indicates high pressure switch fault for 4 seconds.
- H2 indicates FF protection appears 3 times in 150 minutes can't be recovered until re-power on.
- The unit stops running and error code is displayed on the communication board

2.10 F9/L0/L1 Troubleshooting

- F9 indicates AC voltage is too high or too low protection
- L0 indicates DC bus low voltage protection
- L1 indicates DC bus high voltage protection

Allowable voltage range of power source	178~265V
Upper limit of DC generatrix voltage	430V
Lower limit of DC generatrix voltage	150V

■ The unit stops running and error code is displayed on the communication board

2.11 P2/H5 Troubleshooting

- P2 indicates low pressure protection in cooling mode.
- H5 indicates P2 protection appears 3 times in 240 minutes can't be recovered until re-power on.
- The unit stops running and error code is displayed on the communication board

2.12 P3 Troubleshooting

- P3 indicates over current protection
- The unit stops running and error code is displayed on the communication board

2.13 P4/H6 Troubleshooting

- P4 indicates discharge temperature protection
- H6 indicates P4 protection appears 3 times in 100 minutes can't be recovered until re-power on.
- The unit stops running and error code is displayed on the communication board.

2.14 P5 Troubleshooting

- P5 indicates T3 high temperature protection in cooling mode
- The unit stops running and error code is displayed on the communication board.

2.15 P6 Troubleshooting

- P6 indicates compressor inverter module protection.
- The unit stops running and error code is displayed on the communication board.

Situation1: P6 appears immediately when the outdoor unit is powered-on

Situation2: P6 appears immediately after the compressor starts up

Situation3: P6 appears after the compressor has been running for a period of time.

2.16 P7/PC Troubleshooting

- P7 indicates Indoor unit anti-freezing protection.
- PC indicates overwet operation protection.
- The unit stops running and error code is displayed on the communication board.
- P7/PC is applicable only when communication is established between the ComfortStar outdoor unit and the ComfortStar indoor unit via RS485.

2.17 P8 Troubleshooting

- P8 indicates IPM high temperature protection.
- The unit stops running and error code is displayed on the communication board.

2.18 P9 Troubleshooting

- P9 indicates fan motor inverter module protection
- The unit stops running and error code is displayed on the communication board.

2.19 H0 Troubleshooting

- H0 indicates Inverter module and main PCB communication error
- The unit stops running and error code is displayed on the communication board.

There is only one control PCB in the electric control box which integrates the functions of main control board and inverter module, maintenance personnel has to replace the PCB when H0 fault occurs.

3. Temperature Sensor Resistance Characteristics

Outdoor ambient temperature sensor(T4) and condenser coil temperature sensor(T3) resistance characteristics.

Temperature	Resistance	Temperature	Resistance	Temperature	Resistance	Temperature	Resistance
(°C)	(kΩ)	(°C)	(kΩ)	(°C)	(kΩ)	(°C)	(kΩ)
-25	144.266	15	16.079	55	2.841	95	0.708
